

Salesforce Project Phase 8 – Technical Documentation

PROJECT: Consumer Goods Distribution Partner Portal

Data Import and Duplicate Management for Custom Product Object

1. Introduction

The objective of Phase 8 is twofold:

1. Import product data into Salesforce using the Data Import Wizard.
2. Enforce data quality standards by implementing Duplicate Rules for the Custom Product object.

2. Data Import Wizard Process

The Data Import Wizard in Salesforce allows administrators to load bulk records easily through a guided interface. Below are the detailed steps followed for importing Custom Product records.

Step 1: Prepare the CSV File

Create a CSV file containing product data.

- Key fields: Product Name, Product Code, Price, Category, Description.

Ensure the column headers are clear and align with Salesforce field names.

Step 2: Open Data Import Wizard

Navigate to: Setup > Data Import Wizard.

Click Launch Wizard to begin the import process.

	A	B	C	D
1	Custom Price			
2	Iphone	120000		
3	Iphone	78000		
4	iqoo ne	25000		
5	samsun	40000		
6				
7				
8				
9				
10				

Step 3: Select Custom Product Object

From the available objects, scroll down to Custom Objects.
Select Custom Product as the target object for import.

Step 4: Upload CSV File

Click Choose a CSV file and select the prepared product data file.
Proceed to the mapping step.

Step 5: Map Fields

The wizard automatically maps CSV headers to Salesforce fields.
Review and adjust manually if needed.

Example: If 'Product_Code' in the CSV does not auto-map, link it manually to the Product Code field.

Step 6: Run Import and Verify

Start the import process.

After completion, Salesforce displays a confirmation message with the number of records created or updated.

Verify imported records under the Custom Product tab.

3. Creating Matching Rule

A Matching Rule defines criteria Salesforce uses to identify potential duplicates.

Steps:

1. Navigate to Setup > Matching Rules.
2. Click New Rule.
3. Select Custom Product as the object.
4. Add fields: Product Name (Exact/Fuzzy match), Product Code (Exact match).
5. Save the rule.
6. Activate the rule.

4. Creating Duplicate Rule

A Duplicate Rule specifies the action Salesforce takes when a match is found using the matching rule.

Steps:

1. Navigate to Setup > Duplicate Rules.
2. Click New Rule.
3. Select Custom Product as the object.
4. Under Matching Rule, select the rule created earlier.
5. Define behavior:
 - Action: Block record creation or allow with alert.
 - Alert Message: e.g., 'A product with this name and code already exists.'
6. Save and activate.

The screenshot shows the Salesforce Setup interface for configuring a Duplicate Rule. The left sidebar shows the navigation menu with 'Duplicate Rules' selected. The main content area displays the 'Duplicate Rule Detail' for 'DistributorOrderItemDuplicateRule'. The rule is active and uses the 'DistributorOrderItemDuplicateMatchRule' as the matching rule. The action on create is set to 'Block', and the action on edit is set to 'Allow'. The alert text is 'Duplicate product with same quantity exists for this order'. The matching criteria are '(Distributor Order Item: Product_Name EXACT MatchBlank = FALSE) AND (Distributor Order Item: Quantity EXACT MatchBlank = FALSE)'. The rule was created by Tanun Dwarakachari on 9/23/2025 at 3:01 AM and modified by the same user on 9/23/2025 at 3:06 AM.

Duplicate Rule Detail	
Rule Name	DistributorOrderItemDuplicateRule
Description	
Object	Distributor Order Item
Record-Level Security	Enforce sharing rules
Action On Create	Block
Action On Edit	Allow
Alert Text	*Duplicate product with same quantity exists for this order
Alert Active	☒
Matching Rule	☒ DistributorOrderItemDuplicateMatchRule ☒ Matched
Matching Criteria	(Distributor Order Item: Product_Name EXACT MatchBlank = FALSE) AND (Distributor Order Item: Quantity EXACT MatchBlank = FALSE)
Conditions

5. Testing the Implementation

To validate the configuration:

1. Non-Duplicate Test:

- Import or create a product with unique Product Name and Product Code.
- The record should save successfully.

2. Duplicate Test:

- Attempt to create a product with the same Product Name and Product Code.
- Salesforce should block or alert.

6. Conclusion

Phase 8 successfully implemented:

- Data Import Wizard enabled efficient bulk upload of product data with minimal manual effort.
- Matching Rules and Duplicate Rules enforced strong data quality checks.

By combining automation with data governance, Salesforce now provides users with a streamlined, error-resistant environment that improves accuracy, boosts productivity, and supports long-term scalability.
