

Phase 6 — User Interface Development (Lightning App Builder)

Project: [Your Project Name]

=

Purpose

This document provides a comprehensive, step-by-step record of the User Interface development activities completed in Phase 6 of the project using Salesforce Lightning App Builder standard components. It is formatted for project submission and contains explicit names, exact Setup navigation paths, and placeholders for screenshots so the changes can be replicated in another Salesforce org.

Summary of Completed Activities

- Created a custom Lightning Record Page named: Order_Record_Page_Custom for the Order__c object.
 - Selected the Record Page type and assigned the label and object.
 - Chose the One Region template for the Lightning Record Page.
 - Added standard components: Record Detail and Related Lists.
 - Upgraded the Record Detail component to use the existing Order layout.
 - Activated the Order_Record_Page_Custom page as the Org Default for Order records.
 - Created a custom tab named: Order Management Tab for the Order object.
 - Created the tab under Custom Object Tabs setup and added it to the Sales App navigation items.
 - Created a Home Page layout named: Sales_Homepage_Custom using the Three Regions template.
 - Added standard Home Page components: Dashboard, Report Chart, and Recent Items.
 - Saved, activated, and assigned the Home Page layout by user profile.
-).

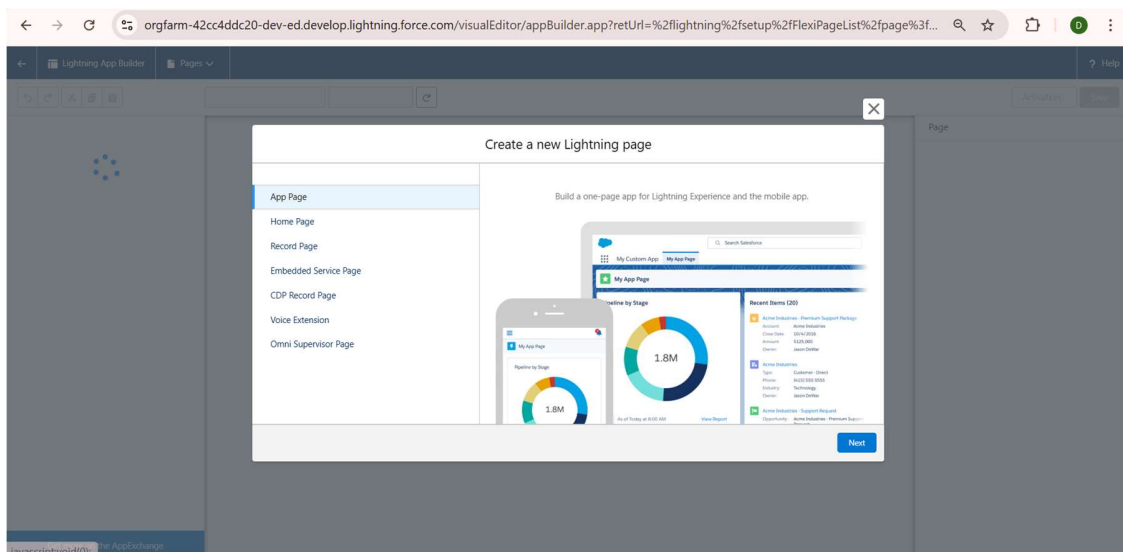

Detailed Step-by-Step Documentation

The following sections provide explicit, repeatable steps that document each activity performed. Exact Setup navigation paths and button names are included. Placeholders for screenshots are included after each major step.

1. Create Lightning Record Page — Order_Record_Page_Custom

Objective: Create and activate a custom Lightning Record Page for the custom object Order__c.

- Open Setup:
- 1. Setup (⚙️) → Setup
- Open Object Manager:
- 2. Setup → Object Manager
- Select object:
- 3. In Object Manager, click: Order__c
- Open Lightning Record Pages:
- 4. Order__c → Lightning Record Pages
- Create New Record Page:
- 5. Click: New → Choose Page Type: Record Page → Next

- Assign Label & Object:

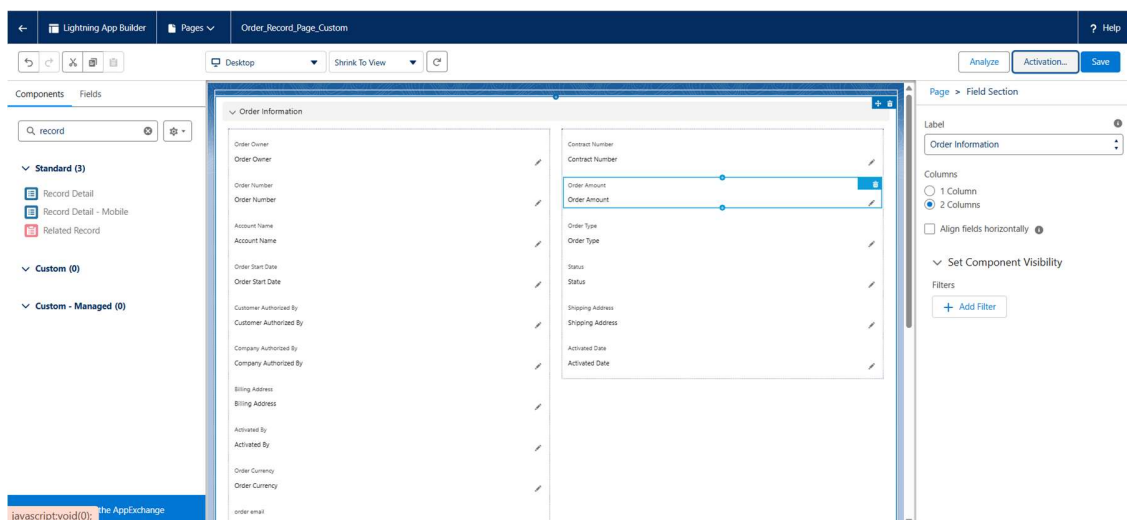

6. Page Label: Order_Record_Page_Custom → Ensure Associated Object: Order__c

- Choose Template:

7. Select Template: One Region → Finish (opens Lightning App Builder canvas)

- Add standard components:

8. From left panel, drag components onto canvas: Record Detail (Record Detail) and Related Lists (Related Lists).

- Upgrade Record Detail to use existing layout:

9. Select the Record Detail component → Click 'Upgrade' or 'Use existing layout' option → Choose existing Order page layout to retain current layout fields and actions.

- Save the page:

10. Click: Save

- Activate the page as Org Default:

11. Click: Activate → Choose: Org Default → Set as Default for: Order__c → Save

2. Create Custom Tab — Order Management Tab

Objective: Create a navigation tab for Order__c and add it to the Sales App navigation items.

- Open Setup:

12. Setup (⚙️) → Setup

- Open Tabs setup:

13. Setup → User Interface → Tabs (or Quick Find: Tabs → Tabs)

- Create a new Custom Object Tab:

14. Under 'Custom Object Tabs', click New → Object: Order__c → Tab Label: Order Management Tab → Select Tab Style / Icon → Next → Save

- Add tab to Sales App navigation:

15. Setup → App Manager → Find 'Sales' → Click the drop-down → Edit → Navigation Items → From 'Available Items' select 'Order Management Tab' → Add → Arrange order → Save

- Verify navigation:

16. App Launcher → Sales → Confirm 'Order Management Tab' is visible → Click it to open Orders list view → Open an Order record to confirm the custom record page appears.

3. Create Home Page — Sales_Homepage_Custom (Three Regions template)

Objective: Create a customized Sales home page with dashboards and charts for quick insights.

- Open Lightning App Builder:

17. Setup → Lightning App Builder

- Create a new Home Page:

18. Click: New → Choose page type: Home Page → Name: Sales_Homepage_Custom → Choose Template: Three Regions → Finish

- Add standard components:

19. From left panel, drag and drop: Dashboard (Analytics Dashboard), Report Chart, and Recent Items onto the respective regions.

- Configure component properties:

20. For Dashboard: select the exact dashboard to render (e.g., Orders_Dashboard). For Report Chart: select Report + Chart. For Recent Items: set number of records to display if required.

- Save the Home Page:

21. Click: Save

- Activate and assign:

22. Click: Activate → Choose assignment: App Default and/or Assign to Profiles → Select Sales App and target profiles (e.g., Sales User, Order Manager) → Save

- Verify:

23. App Launcher → Sales → Confirm Sales_Homepage_Custom renders Dashboard, Report Chart, Recent Items for assigned profiles.

4. Configure Utility Bar — Add Order_Helper_Utility

Objective: Add and configure the Utility Bar items (Notes, History) and a custom utility named Order_Helper_Utility in the Sales App.

- Open App Manager:

24. Setup → App Manager

- Edit Sales App:

25. Find 'Sales' → Click down-arrow → Edit

- Open Utility Bar:

26. Within App settings, click: Utility Bar

- Add standard utilities:

27. Click: Add → Select 'Notes' → Configure Label (e.g., 'Order Notes') → Add. Click Add → Select 'History' → Configure → Add.

- Add Order_Helper_Utility:

28. Click Add → Choose 'Flow' or 'Custom Lightning Component' → Select the Flow or Component created for the 'order helper' actions (if available). Set Label: Order_Helper_Utility → Choose Icon → Configure panel height/behavior → Add

- Reorder utilities and configure properties:

29. Drag utilities to reorder. Click each utility to set properties like Panel Height, Default Open state, and Desktop/Mobile visibility.

- Save the App:

30. Click: Save to persist Utility Bar changes.

- Verify in Sales App:

31. App Launcher → Sales → Confirm Utility Bar displays Order_Helper_Utility, Notes, and History. Click each to validate behavior.

5. Testing & Validation

Objective: Validate that all UI changes function correctly across profiles and devices.

32. Recommended tests and steps:

- Preview pages in Lightning App Builder: Open the Record Page and Home Page in Lightning App Builder → Click Preview → Test Desktop and Phone views using representative records.
- Cross-profile verification: Setup → Users → Users → Use 'Login As' (or sign in as test users) for each target profile (System Administrator, Sales User, Order Manager). Confirm: tab visibility, custom record page rendering, home page rendering, and utility behavior.
- Mobile testing: Use Salesforce Mobile App → Log in as test user → Open Sales App → Navigate to Orders → Open a record → Confirm record page renders and utilities operate as configured (note: some utility items might not be available on mobile).
- Permission checks: Confirm dashboards and report charts respect folder permissions. Verify field-level security hides sensitive fields from unauthorized profiles.
- Performance & usability: Open multiple records and monitor load times. Confirm utility flow/components execute without errors and within acceptable time.
- Acceptance checklist: Ensure all items below are complete (see Acceptance Checklist section).
 - Acceptance Criteria:
 - Order_Record_Page_Custom displays Record Detail and Related Lists and is active as Org Default for Order__c.
 - Order Management Tab is visible in Sales app and opens Orders list view.
 - Sales_Homepage_Custom renders Dashboard, Report Chart, and Recent Items and is assigned to intended profiles.
 - Utility Bar contains Order_Helper_Utility, Notes and History; all utilities function correctly.
 - Cross-profile and mobile tests pass without critical issues.

8. Appendix — Exact Names & Setup Navigation Paths

Objects & Pages:

- Object API Name: Order__c
- Lightning Record Page: Order_Record_Page_Custom
- Custom Tab Label: Order Management Tab
- Home Page: Sales_Homepage_Custom
- Utility Bar Item Label: Order_Helper_Utility

Exact Setup Paths (Quick Find or menu):

- Setup → Object Manager → Order__c → Lightning Record Pages
- Setup → User Interface → Tabs
- Setup → App Manager → Sales → Edit → Navigation Items
- Setup → Lightning App Builder → New → Home Page
- Setup → App Manager → Sales → Edit → Utility Bar
- Setup → Users → Users (for Login As / testing)
